

SEETECH[®] EASY WAREHOUSE

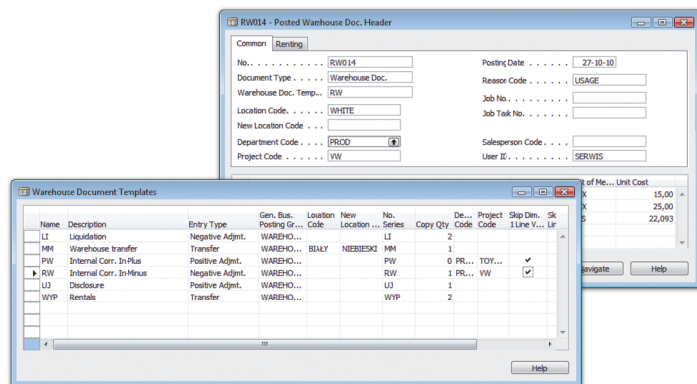

Benefits:

- We will provide a replacement for traditional warehouse books that you use in your company. It will help you avoid mistakes when entering data in the books.
- We will simplify the processes of creating and handling warehouse documentation. The selection of the right template will facilitate the process of completing the documents. Using a previously created document template will accelerate the process of adding warehouse data to the system.
- We will minimize the involvement of your employees in document handling. You will have a chance to use their time for carrying out other tasks and they will be able to process your Customers' orders faster.
- We will give you full control over inventory management. Information on the goods, from the very moment of their reception to their dispatch from the warehouse, will be stored in one place. The module will let you monitor all warehouse operations.
- We will grant you easy access to document history. The document handling system in our module is very intuitive and it is very similar to handling standard documents.
- We will streamline the process of hiring out goods. The system allows you to keep a record of detailed data on the person hiring the goods, the hiring period and the return time. You can also track the status of hired goods.

Easy Warehouse - Manage your warehouse efficiently

This proprietary Seetech solution will enrich the functionality of the Microsoft Dynamics NAV system warehouse management feature. The module will allow you to prepare templates of warehouse documents for your company and to register them in the system.

Easy Warehouse module is fully integrated with the Microsoft Dynamics NAV system. This means that if you purchase a license to use our solution, the scope of functionalities of the currently applied system will be extended by the ability to maintain an electronic warehouse inventory control system. This will allow you to manage your employees' time and efforts more efficiently.

A sample Easy Warehouse module added to the Microsoft Dynamics NAV system by Seetech. Thanks to the suggestions of the company's Customers and based on their experience, Seetech developed a clear and intuitive user interface.

The purpose of the module is to simplify the process of creating documents and to minimize the human resources allocated to warehouse record management. The presented solution allows you to store the posted warehouse documents the same way all other documents are stored in the Microsoft Dynamics NAV system. Thanks to the template creating option, the authorized users will be able to draft an unlimited number of documents necessary for everyday handling of the company's business.

All documents (GINs, GRNs, warehouse transfer sheets, etc.) issued using the module are automatically stored in the system. The users may review the previously issued document, revise it and print it again anytime. It is up to you to decide on the number and variety of predefined documents and the way they should be stored at bookkeeping and warehouse accounts. The Easy Warehouse add-on module also enables electronic data exchange with any clients of your company.

By choosing to use the Easy Warehouse module, you will receive a comprehensive solution allowing you to track

and manage your inventory. Your warehouse history will be available in the Microsoft Dynamics NAV system. It will enable your authorized employees from selected departments to track product availability on an ongoing basis.

Transparent processes	Streamline your warehouse management processes by using the simple and intuitive Easy Warehouse module.
Easy to define necessary warehouse documents	Create templates of warehouse documents that are essential for warehouse management in your company.
Efficiency boost	Work more efficiently thanks to using intuitive documents and reduce the efforts of your employees in preparation of such documents from scratch to a minimum.
Ongoing access to and control over information	Have insight into your posted warehouse documents and gain access to the information contained in them.
Handling hired goods and returned goods	Manage the processes of hiring out and accepting goods returned to your inventory. Control and record all movements of goods through the dedicated warehouse documents.
